Rabbit brain has been used in several works for the analysis of neurodevelopment. In this web page we provide a digital rabbit brain atlas that allows the automatic identification of brain regions, which is a crucial step for various neuroimage analyses. The delineation of the areas in the atlas has been based on magnetic resonance imaging, including both structural and diffusion weighted. 60 regions were defined, comprising cortex, white matter, and deep ...

The brain constantly transmits signals whether during idle wakefulness (i.e., "at rest") or different behavioral states like cognitively-demanding tasks. Studies using functional magnetic resonance imaging (fMRI) in humans have consistently observed neural networks of coherent activity within and between brain structures subserving some functional purpose or neuronal processing.

Muñoz-Moreno et al. (2013). This is based on 10 multi-modal scans acquired at 3 T with anisotropic resolution (0.15 mm, 0.15 mm, 0.7 mm) and it provides 60 anatomical regions, whose borders were identified by overlaying structural and diffusion weighted imaging (DWI) derived modalities.

ST at the whole-brain scale. We generated a whole-brain molecular atlas by capturing the spatial patterns of gene expression in the adult mouse brain using ST (). We hybridized 75 coronal sections from one brain hemisphere that covered the entire AP axis onto ST arrays (Fig. 1A and fig. S1). Using a computational framework designed to generate reference maps (), we aligned each imaged brain ...
