Creating an Example XML Document The sample document you'll use today, and which you'll also see tomorrow when working with DTDs, will store data about a set of employees, such as their names, projects they're working on, and so on. This document will start, as all XML documents should, with an XML declaration: `<?xml version = "1.0"?>`

Acces PDF Example Xml Document

A document type declaration, or DOCTYPE, is an instruction that associates a particular XML or SGML document (for example, a webpage) with a document type definition (DTD) (for example, the formal definition of a particular version of HTML 2.0 - 4.0). In the serialized form of the document, it manifests as a short string of markup that conforms to a particular syntax.

Document type declaration - Wikipedia

An example is `<?xml version="1.0" encoding="UTF-8"?>`. Characters and escaping. XML documents consist entirely of characters from the Unicode repertoire. Except for a small number of specifically excluded control characters, any character defined by Unicode may appear within the content of an XML document.
